Providing Accessible Solutions

Communicate without barriers, share without limits, manage with ease...

Professional success in today's workplace requires access to technology that is easily approachable by everyone, including persons with disabilities. That's why Canon has taken the lead in developing new solutions that make office products easier to use, regardless of ability. For more than 25 years, Canon has been addressing access for people with disabilities and the aging. Our latest accessible solutions build upon this foundation, so that everyone can benefit from the opportunities that Canon technology provides.

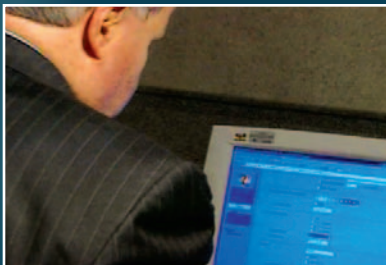

Voice Guidance Kit

The Voice Guidance Kit enables users of a Canon imageRUNNER device to hear audio confirmation when operating the machine. This feature provides access to the basic copy functions for users who are blind or visually impaired by guiding them through the copy process and providing audible job confirmation. The voice type, volume, and speed are adjustable based on the user's preference.

Remote Operator's Software Kit

The Remote Operator's Software Kit provides alternative access for persons operating imageRUNNER devices. Users can operate system functions from a laptop or desktop personal computer using this software, which emulates the imageRUNNER control panel. All control panel functions including copy, print, fax, scan, and send functions from the touch screen are available, including access to the hard keys. The Remote Operator's Software Kit was designed to assist persons with mobility or dexterity impairments.

Remote User Interface

The Remote User Interface (UI) is preinstalled software located in most Canon IP-based imaging equipment. This software enables users to access the copy machine's main copy functions using a standard Web browser. This easy access to copying from a personal computer is convenient for users with visual impairment, blindness, or who use wheelchairs. The Remote UI can be used with magnification and screen reading software.

Braille Label Kit

The Braille Label Kit contains transparent Braille labels that affix to the hard keys of Canon's copy and facsimile machines. The Braille labels provide visually impaired users with improved access to Canon's copy and fax features.

Dual Control Panel

The Dual Control Panel provides easy access to Canon's color copy functions from a seated position. The control panel is mounted in an upright position for easy input and visibility for our customers who use wheelchairs. The Dual Control Panel is available as a standard Color Laser Copier (CLC) feature for specific machines and as an optional accessory.

Accessibility Handle

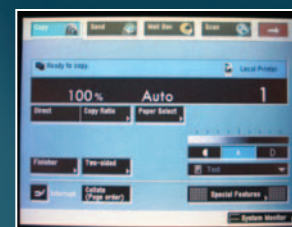

Users who copy from a seated position often experience difficulty reaching a fully raised document feeder. The Accessibility Handle-A1 has been designed to enable a person in a wheelchair to easily close the feeder from the upright position. The Accessibility Handle is an optional feature on various imageRUNNER devices.

Reversed Display for Control Panel

The user-friendly control panel provides an optional reversed display for users with visual impairment. The text and background of the display can be reversed from the standard to white text on a black background. The adjustable display contrast provides additional clarity for users with visual impairment.

Section 508

Effective June 25, 2001, Section 508 of the Rehabilitation Act mandates that Electronic and Information Technology (E&IT) products and services developed, procured, maintained, or used by the Federal Government allow Federal employees and members of the public with disabilities to have access to and use of Federal information data that is comparable to the access and use available to non-disabled Federal employees and members of the public.
